

JINLAN LIVING MALL

Type	Commercial Building
Services	Architecture Design
Location	Weijin South Road, Tianjin
Client	Jinlan Group, Tianjin
Scale	302,000sqm
Time	2008

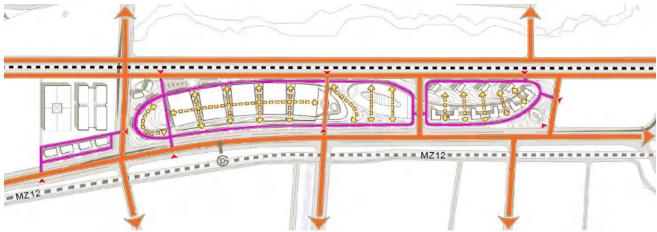

JINLAN LIVING MALL is not only the gateway of the southern part of the city, but also an important functional node of the city. However, its importance has not been noticed due to the low-level and disordered development for a long time. Therefore, this project will create an opportunity to form the window effect and become a scenery line between central area and future city. The business part of this project consists of three parts: front commercial stores, rear three-dimensional parking space and underground commercial space. By introducing the design concept of 3D parking and green roof parking, the large parking demand has been satisfied. Meanwhile, the commerce on third and fourth floor has been stimulated. The commercial concept of double ground floors has been realized through the design of underground commercial space. In this way, the commercial space of whole four floors has good commercial value.
